

LANDSCAPE ARCHITECTURE

CREATE AND DOCUMENT DESIGN IDEAS

Your home studio will allow you to best create work and execute ideas in the production of landscape architecture design products. There are a variety of tools which you can use - digital or analog. What other tools can you use to learn and share with others your ideas? What apps can help you in your process of critical thinking and designing?

You are going to link your design work and ideas to a narrative and a design idea you have? What body of work will you be creating and sharing with the instructor and other students? Remember, the design process - the exploration and iteration of ideas - is an important component of your grade in Studio.

Lastly, you are responsible to conveying or documenting and communicating your work in the best means possible, just as in the University studio; however, there are many tools and techniques at your disposal. Smart Phones have various levels of camera quality - but there are better settings than others. Natural light vs flash - you need to figure this out prior to submitting work. Some work might need to be put into Photoshop or some app/program for color and light correction.
